

# Calculating Churn Rates

LEARN SQL FROM SCRATCH

TINA LUMI

23-07-2018

# TABLE OF CONTENTS

---

1. GET FAMILIAR WITH THE COMPANY
  - / how many months has the company been operating?  
Which months do you have enough information to calculate a churn rate?
  - / what segments of users exist?
2. WHAT IS THE OVERALL CHURN TREND SINCE THE COMPANY STARTED?
3. COMPARE THE CHURN RATES BETWEEN USER SEGMENTS
  - / which segment of users should the company focus on expanding?

# GET FAMILIAR WITH THE COMPANY

## 1. Get familiar with the company

- / How many months has the company been operating? Which months do you have enough information to calculate a churn rate?
- / What segments of users exist?

First let's take a look at the first 100 rows of the subscriptions table:

```
SELECT *  
FROM subscriptions  
LIMIT 100;
```

There are four columns in the table: id, subscription\_start, subscription\_end and segment. This data is enough to perform churn analysis. Let's write additional queries to get more information about company operations

| id  | subscription_start | subscription_end | segment |
|-----|--------------------|------------------|---------|
| 1   | 2016-12-01         | 2017-02-01       | 87      |
| 2   | 2016-12-01         | 2017-01-24       | 87      |
| 3   | 2016-12-01         | 2017-03-07       | 87      |
| 4   | 2016-12-01         | 2017-02-12       | 87      |
| 5   | 2016-12-01         | 2017-03-09       | 87      |
| 6   | 2016-12-01         | 2017-01-19       | 87      |
| 7   | 2016-12-01         | 2017-02-03       | 87      |
| 8   | 2016-12-01         | 2017-03-02       | 87      |
| 9   | 2016-12-01         | 2017-02-17       | 87      |
| 10  | 2016-12-01         | 2017-01-01       | 87      |
| 11  | 2016-12-01         | 2017-01-17       | 87      |
| 12  | 2016-12-01         | 2017-02-07       | 87      |
| 13  | 2016-12-01         | ∅                | 30      |
| 14  | 2016-12-01         | 2017-03-07       | 30      |
| 15  | 2016-12-01         | 2017-02-22       | 30      |
| 16  | 2016-12-01         | ∅                | 30      |
| 17  | 2016-12-01         | ∅                | 30      |
| 18  | 2016-12-02         | 2017-01-29       | 87      |
| 19  | 2016-12-02         | 2017-01-13       | 87      |
| 20  | 2016-12-02         | 2017-01-15       | 87      |
| 21  | 2016-12-02         | 2017-01-15       | 87      |
| ... | ...                | ...              | ...     |
| 99  | 2016-12-06         | ∅                | 30      |
| 100 | 2016-12-06         | 2017-03-11       | 30      |

# GET FAMILIAR WITH THE COMPANY

/ How many months has the company been operating? Which months do you have enough information to calculate a churn rate?

```
SELECT  
MIN(subscription_start) AS first_signup  
,MAX(subscription_end) AS last_cancellation  
FROM subscriptions;
```

| first_signup | last_cancellation |
|--------------|-------------------|
| 2016-12-01   | 2017-03-31        |

The company started operating on 2016-12-01, last cancellation was on 2017-03-31. According to the table from previous query some subscriptions have not been cancelled but we do not have any data past March, so with absolute certainty we can say that the company has been operating for 4 months: December, January, February and March

Taking in consideration minimum subscription of 31 days there could have been no cancelations in December, hence we can provide churn analysis only for 3 months - January, February and March

*crurn = cancelations during a period of time / active subscribers*

# GET FAMILIAR WITH THE COMPANY

## / What segments of users exist?

From the first query we can see two segments – 30 and 87. Let's write an additional query to confirm the segments and the number of users in each segment

```
SELECT DISTINCT segment
, COUNT (*) as total
FROM subscriptions
GROUP BY segment;
```

New query confirms that there are two segments of subscribers – 30 and 87

| segment | total |
|---------|-------|
| 87      | 1000  |
| 30      | 1000  |

users by segment

# CHURN TREND

## 2. What is the overall churn trend since the company has started?

Let's perform churn analysis for January, February and March.  
For that let's first create a temporary table **months** which will give us three time periods

```
SELECT
    '2017-01-01' AS first_day,
    '2017-01-31' AS last_day
UNION
SELECT
    '2017-02-01' AS first_day,
    '2017-02-28' AS last_day
UNION
SELECT
    '2017-03-01' AS first_day,
    '2017-03-31' AS last_day
FROM subscriptions;
```

| first_day  | last_day   |
|------------|------------|
| 2017-01-01 | 2017-01-31 |
| 2017-02-01 | 2017-02-28 |
| 2017-03-01 | 2017-03-31 |

# CHURN TREND

Let's cross join *subscriptions* table with *months*. This will give us a range of data to work with

```
WITH months AS (  
  SELECT  
    '2017-01-01' AS first_day,  
    '2017-01-31' AS last_day  
  UNION  
  SELECT  
    '2017-02-01' AS first_day,  
    '2017-02-28' AS last_day  
  UNION  
  SELECT  
    '2017-03-01' AS first_day,  
    '2017-03-31' AS last_day  
  FROM subscriptions  
)  
  
SELECT *  
FROM subscriptions  
CROSS JOIN months;
```

| id   | subscription<br>_start | subscription<br>_end | segment | first_day  | last_day   |
|------|------------------------|----------------------|---------|------------|------------|
| 1    | 2016-12-01             | 2017-02-01           | 87      | 2017-01-01 | 2017-01-31 |
| 1    | 2016-12-01             | 2017-02-01           | 87      | 2017-02-01 | 2017-02-28 |
| 1    | 2016-12-01             | 2017-02-01           | 87      | 2017-03-01 | 2017-03-31 |
| 2    | 2016-12-01             | 2017-01-24           | 87      | 2017-01-01 | 2017-01-31 |
| 2    | 2016-12-01             | 2017-01-24           | 87      | 2017-02-01 | 2017-02-28 |
| 2    | 2016-12-01             | 2017-01-24           | 87      | 2017-03-01 | 2017-03-31 |
| 3    | 2016-12-01             | 2017-03-07           | 87      | 2017-01-01 | 2017-01-31 |
| 3    | 2016-12-01             | 2017-03-07           | 87      | 2017-02-01 | 2017-02-28 |
| 3    | 2016-12-01             | 2017-03-07           | 87      | 2017-03-01 | 2017-03-31 |
| 4    | 2016-12-01             | 2017-02-12           | 87      | 2017-01-01 | 2017-01-31 |
| 4    | 2016-12-01             | 2017-02-12           | 87      | 2017-02-01 | 2017-02-28 |
| 4    | 2016-12-01             | 2017-02-12           | 87      | 2017-03-01 | 2017-03-31 |
| 5    | 2016-12-01             | 2017-03-09           | 87      | 2017-01-01 | 2017-01-31 |
| 5    | 2016-12-01             | 2017-03-09           | 87      | 2017-02-01 | 2017-02-28 |
| 5    | 2016-12-01             | 2017-03-09           | 87      | 2017-03-01 | 2017-03-31 |
| 6    | 2016-12-01             | 2017-01-19           | 87      | 2017-01-01 | 2017-01-31 |
| 6    | 2016-12-01             | 2017-01-19           | 87      | 2017-02-01 | 2017-02-28 |
| 6    | 2016-12-01             | 2017-01-19           | 87      | 2017-03-01 | 2017-03-31 |
| ..   | ...                    | ...                  | ...     | ...        | ...        |
| 2000 | 2017-03-30             | Ø                    | 30      | 2017-01-01 | 2017-01-31 |
| 2000 | 2017-03-30             | Ø                    | 30      | 2017-02-01 | 2017-02-28 |
| 2000 | 2017-03-30             | Ø                    | 30      | 2017-03-01 | 2017-03-31 |

# CHURN TREND

Let's keep extracting data we need by creating a new table **status** from previous table (which we have named **cross\_join**) and add two new columns: **is\_canceled\_87** and **is\_canceled\_30**  
**is\_canceled\_87** and **is\_canceled\_30** equals 1 if the subscription has been cancelled and 0 otherwise

```
SELECT id
,first_day as month
,CASE
    WHEN subscription_end BETWEEN first_day AND last_day
    AND segment = 87
    THEN 1
    ELSE 0
END AS is_canceled_87
,CASE
    WHEN subscription_end BETWEEN first_day AND last_day
    AND segment = 30
    THEN 1
    ELSE 0
END AS is_canceled_30
FROM cross_join;
```

| id   | month      | is_canceled_87 | is_canceled_30 |
|------|------------|----------------|----------------|
| 1    | 2017-01-01 | 0              | 0              |
| 1    | 2017-02-01 | 1              | 0              |
| 1    | 2017-03-01 | 0              | 0              |
| 2    | 2017-01-01 | 1              | 0              |
| 2    | 2017-02-01 | 0              | 0              |
| 2    | 2017-03-01 | 0              | 0              |
| 3    | 2017-01-01 | 0              | 0              |
| 3    | 2017-02-01 | 0              | 0              |
| 3    | 2017-03-01 | 1              | 0              |
| 4    | 2017-01-01 | 0              | 0              |
| 4    | 2017-02-01 | 1              | 0              |
| 4    | 2017-03-01 | 0              | 0              |
| 5    | 2017-01-01 | 0              | 0              |
| 5    | 2017-02-01 | 0              | 0              |
| 5    | 2017-03-01 | 1              | 0              |
| 6    | 2017-01-01 | 1              | 0              |
| 6    | 2017-02-01 | 0              | 0              |
| 6    | 2017-03-01 | 0              | 0              |
| 7    | 2017-01-01 | 0              | 0              |
| ...  | ...        | ...            | ...            |
| 1999 | 2017-01-01 | 0              | 0              |
| 1999 | 2017-02-01 | 0              | 0              |
| 1999 | 2017-03-01 | 0              | 0              |
| 2000 | 2017-01-01 | 0              | 0              |
| 2000 | 2017-02-01 | 0              | 0              |
| 2000 | 2017-03-01 | 0              | 0              |

# CHURN TREND

Similarly to *is\_canceled\_87* and *is\_canceled\_30* let's add two more columns: *is\_active\_87* and *is\_active\_30*

To perform churn analysis we need to compare the number of active subscriptions to the number of cancelled subscriptions in a fixed time period (month in our case)

```
,CASE
  WHEN (subscription_start < first_day)
    AND (
      subscription_end > first_day
      OR subscription_end IS NULL
    )
    AND segment = 87
  THEN 1
  ELSE 0
END AS is_active_87
,CASE
  WHEN (subscription_start < first_day)
    AND (
      subscription_end > first_day
      OR subscription_end IS NULL
    )
    AND segment = 30
  THEN 1
  ELSE 0
END AS is_active_30
```

# CHURN TREND

To do that let's create another table using previous table (which we have named *status*)

The table should give us total of cancelled and active subscriptions by segment per each month

```
SELECT month
, SUM(is_active_87) AS sum_active_87
, SUM(is_canceled_87) AS sum_canceled_87
, SUM(is_active_30) AS sum_active_30
, SUM(is_canceled_30) AS sum_canceled_30
FROM status
GROUP BY month;
```

| month      | sum_active_87 | sum_canceled_87 | sum_active_30 | sum_canceled_30 |
|------------|---------------|-----------------|---------------|-----------------|
| 2017-01-01 | 278           | 70              | 291           | 22              |
| 2017-02-01 | 462           | 148             | 518           | 38              |
| 2017-03-01 | 531           | 258             | 716           | 84              |

# CHURN TREND

Naming previous table *status\_aggregate* and using it's data we can now calculate churn rates per month

```
SELECT month
, 1.0 * sum_canceled_87/sum_active_87 as churn_87
, 1.0 * sum_canceled_30/sum_active_30 as churn_30
FROM status_aggregate
GROUP BY month;
```

| month      | churn_87    | churn_30   |
|------------|-------------|------------|
| 2017-01-01 | 0.251798561 | 0.07560137 |
| 2017-02-01 | 0.32034632  | 0.07335907 |
| 2017-03-01 | 0.485875706 | 0.11731844 |

churn rates

# CHURN TREND / CHURN RATES

*Churn trend in January, February and March:*

| month      | churn_87    | churn_30   |
|------------|-------------|------------|
| 2017-01-01 | 0.251798561 | 0.07560137 |
| 2017-02-01 | 0.32034632  | 0.07335907 |
| 2017-03-01 | 0.485875706 | 0.11731844 |

*Churn trend in % compared to previous period:*

| month      | churn_87 | churn_30 |
|------------|----------|----------|
| 2017-01-01 | 25.17%   | 7.56%    |
| 2017-02-01 | 27.20%   | 2.97%    |
| 2017-03-01 | 51.67%   | 59.92%   |

Apart from February when churn rate for **segment 30** has dropped by ~3% overall churn rate has been growing for both segments of users

Churn rate for **segment 87** has been significantly larger than for **segment 30**

Biggest churn rate jump was for **segment 30** in March (almost 60% bigger churn compared to previous period)

# CHURN RATES

/ What segments of users should the company focus on expanding?

Let's write another query to find a number of active users per each segment

```
SELECT segment
, COUNT(*) as total
FROM subscriptions
WHERE segment IN (87, 30)
AND subscription_end IS NULL
GROUP BY segment;
```

| segment | total |
|---------|-------|
| 87      | 524   |
| 30      | 856   |

Considering that in total there have been 1000 users for each segment the company should focus on expanding **segment\_87** since churn rates for this segment have been higher and total number of active users is smaller
